wordpress theme in php

No

No

Front end for an app that allows users to buy crypto data in a non-programmatic way

Can you explain the hierarchy of apple concerning conway's law?

Develop a contract generator.

How did you agree on what was to be implemented?

What was the most difficult part of the project?

changes in plan

client satisfaction with the project.

The most frustrating part was that every time that the client saw a new "version" of the product, they had new ideas that they thought would lead to a even more interesting frontend. In the end, it was just a complicated non-user friendly mess.

always changing requirements and expectations

What percentage of the effort in a typical software project is spent actually programming?

Why are object-oriented methods so successful in building long-lived software systems?

because of its distributed nature

the possibility for adaptability, saves costs in the long-run

Have a self describing for someone new on a project

They are very maintainable as the structure (if well-built) can easily be extended.

it's easy to update

intuitive way of structuring a project

Good maintenance
Easy to add additional functionality

It's easier to maintain these methods because they have their own responsibility

Requirements are clearly defined in the objects and not in the customer's "technical words".
