P2: Exercise 1 Discussion

Pooja Rani
5 Mar 2021
Exercise: Tasks

• Parser for glob patterns

  • Initialization of pattern (e.g., *.md)

• Input: Filename (e.g., exercise_01.md)

• Output: Boolean answer whether the filename matches the pattern
// Create new Pattern
public FilePattern(String pattern) {
    // your implementation
}

// Return whether the pathname matches the pattern.
public boolean matches(String filename) {
    // your implementation
}
Two approaches

• Custom algorithm
  • Recursive
  • Look at the first character of pattern and filename at a time

• Regular expressions
  • One-liner can cover most cases
  • But: What about special character?
private boolean match_rec(String pattern, String filename) {
    ...
    if (pattern.charAt(0) != filename.charAt(0)) {
        return false;
    } else {
        return match_rec(pattern.substring(1), filename.substring(1));
    }
    ...
}
Custom Algorithm using recursion

private boolean match_rec(String pattern, String filename) {
    ...
    if (pattern.charAt(0) != filename.charAt(0)) {
        return false;
    } else {
        return match_rec(pattern.substring(1), filename.substring(1));
    }
    ...
}

match_rec("abc", "abcde.txt") ==
match_rec("bc", "bcde.txt") ==
match_rec("c", "cde.txt") ==
match_rec("", "de.txt") ==
Custom Algorithm using recursion

```java
private boolean match_rec(String pattern, String filename) {
    ...
    // Question mark. If filename is not empty, match the remainder
    // of pattern to the remainder of filename.
    if (pattern.startsWith(" ?")) {
        if (filename.isEmpty()) {
            return false;
        } else {
            return match_rec( pattern.substring(1), filename.substring(1) );
        }
    }
}
```
Custom Algorithm using recursion

```java
private boolean match_rec(String pattern, String filename) {
    ...
    // Question mark. If filename is not empty, match the remainder
    // of pattern to the remainder of filename.
    if (pattern.startsWith(" ?")) {
        if (filename.isEmpty()) {
            return false;
        } else {
            return match_rec(pattern.substring(1), filename.substring(1));
        }
    }
    return true;
}

match_rec(" ?oo.txt", "foo.txt") ==
match_rec(" oo.txt", "oo.txt") ==
```
Custom Algorithm using recursion

private boolean match_rec(String pattern, String filename) {
    ...
    // Star. Try to match any remainder.
    for (int i = 0; i <= filename.length(); i++) {
        if (match_rec(pattern.substring(1), filename.substring(i))) {
            return true;
        }
    }
    return false;
}
Custom Algorithm using recursion

```java
private boolean match_rec(String pattern, String filename) {
    ...
    // Star. Try to match any remainder.
    for (int i = 0; i <= filename.length(); i++) {
        if (match_rec(pattern.substring(1), filename.substring(i))) {
            return true;
        }
    }
    return false;
}
```

- `match_rec("*.txt", "foo.txt")` == `true`
- `match_rec(".txt", "foo.txt")` == `false`
- `match_rec(".txt", "oo.txt")` == `false`
- `match_rec(".txt", "o.txt")` == `false`
- `match_rec(".txt", "txt")` == `false`
private boolean matchRegex(String filename) {
    String regexPattern = pattern;
    regexPattern = regexPattern.replace("\*", ".*");
    regexPattern = regexPattern.replace("?", ".");
    return Pattern.matches(regexPattern, filename);
}
private boolean matchRegex(String filename) {
    String regexPattern = pattern;
    regexPattern = regexPattern.replace(".*");
    regexPattern = regexPattern.replace("?");
    return Pattern.matches(regexPattern, filename);
}

"." matches exactly one character
".*" matches any number of characters

• What about special characters? ⇒ Read the documentation!
  regexPattern = regexPattern.replace("\.", "\\\.");
public class FilePattern{

    public String string;

    public FilePattern(String string) {
        this.string = string;
    }
}

Examples: Encapsulation & names
Examples: Encapsulation & names

```java
public class FilePattern{
    public String string;
    public FilePattern(String string ) {
        this.string = string;
    }
}
```
Examples: Encapsulation & names

```java
public class FilePattern{
    protected String string;

    public FilePattern(String string) {
        this.string = string;
    }
}
```

Make attributes protected
public class FilePattern{

    protected String pattern;

    public FilePattern(String pattern) {
        this.pattern = pattern;
    }

}
Examples: Useless code

```java
protected String tempPattern;

public String getTempPattern() {
    return this.tempPattern;
}
```
Examples: Useless code

```java
protected String tempPattern;

public String getTempPattern() {
    return this.tempPattern;
}
```

Unused outside of class! Use tempPattern
public class TestMain {
    public static void main(String[] args) {
        FilePattern a = new FilePattern("fname*");
        System.out.println(a.matches("fname.txt"));
    }
}
public class TestMain {
    public static void main(String[] args) {
        FilePattern a = new FilePattern("fname*");
        System.out.println(a.matches("fname.txt"));
    }
}
public class TestMain {
    public static void main(String[] args) {
        FilePattern a = new FilePattern("fname*");
        System.out.println(a.matches("fname.txt"));
    }
}

public class FilePatternTest {
    @Test
    public void fnameStarMatchesFnameDotTxt() {
        FilePattern a = new FilePattern("fname*");
        assertTrue(a.matches("fname.txt"));
    }
}
Manual Testing

```java
public class FilePatternTest {
    @Test
    public void fnameStarMatchesFnameDotTxt() {
        FilePattern a = new FilePattern("fname*" façade);
        assertTrue(a.matches("fname.txt" façade));
    }
}

Add the scenario as a permanent test
Javadoc
Javadoc: Program to generate java code documentation.

Input: Java source file (.java)

output: HTML files documenting specification of java code.
Comment types

/**

// One-line comment
Why to document?
Why to document?

Code is read much more often than it is written
Why to document?

Even if you don't intend anybody else to read your code, that somebody is probably going to be you, twelve months from now.
A function

```java
public Affine2 setToTrnRotScl (float x, float y, float degrees, float scaleX, float scaleY) {
    m02 = x;
    m12 = y;

    if (degrees == 0) {
        m00 = scaleX;
        m01 = 0;
        m10 = 0;
        m11 = scaleY;
    } else {
        float sin = MathUtils.sinDeg(degrees);
        float cos = MathUtils.cosDeg(degrees);

        m00 = cos * scaleX;
        m01 = -sin * scaleY;
        m10 = sin * scaleX;
        m11 = cos * scaleY;
    }

    return this;
}
```

https://github.com/libgdx/libgdx/blob/master/gdx/src/com/badlogic/gdx/math/Affine2.java
Describe your function

/** Sets this matrix to a concatenation of translation, rotation and scale. It is a more efficient form for:

* <code>idt().translate(x, y).rotate(degrees).scale(scaleX, scaleY)</code>
* @param x The translation in x.
* @param y The translation in y.
* @param degrees The angle in degrees.
* @param scaleX The scale in y.
* @param scaleY The scale in x.
* @return This matrix for the purpose of chaining operations. */

public Affine2 setToTrnRotScl (float x, float y, float degrees, float scaleX, float scaleY) {
    m02 = x;
    m12 = y;

    if (degrees == 0) {
        m00 = scaleX;
        m01 = 0;
        m10 = 0;
        m11 = scaleY;
    } else {
        float sin = MathUtils.sinDeg(degrees);
        float cos = MathUtils.cosDeg(degrees);

        m00 = cos * scaleX;
        m01 = -sin * scaleY;
        m10 = sin * scaleX;
        m11 = cos * scaleY;
    }
    return this;
}

https://github.com/libgdx/libgdx/blob/master/gdx/src/com/badlogic/gdx/math/Affine2.java
Tell others how to use your code

```java
/**

What is Good Documentation?
What is Good Documentation?

```java
/**
 * When I was a kid I had absolutely no idea the day will come when I stop writing code and begin to do JavaDoc.
 * Nevertheless this method returns 42.
 *
 * @return 42
 */
```
What is Good Documentation?

```java
/**
 * When I was a kid I had absolutely no idea
 * the day will come when I stop writing code
 * and begin to do Javadoc.
 * Nevertheless this method returns 42.
 * @return 42
 */

Javadoc assumes first lines to be the summary.
```
What is Good Documentation?

/ **
  * This is a nice method to assert beautiful quality
  * of amazing chars at a given index under the
  moonlight
  */
What is Good Documentation?

/**
 * This is a nice method to assert beautiful quality
 * of amazing chars at a given index under the
 * moonlight
 */
What is Good Documentation?

```cpp
/**
 * This is a nice method to assert beautiful quality of amazing chars at a given index under the moonlight
 */
```

Do not use fillers

This method/function/class.. is not necessary.
What is Good Documentation?

First word should be a verb.

Helps to understand code faster

```cpp
/**
 * Removes user from the list
 */
/**
 * Translates window to the left
 */
/**
 * Establishes network connection
```
What is Good Documentation?

Remember to describe corner cases

e.g. null? negative ints?

/**
 * ...
 * Moves snake to specified position.
 * Snake should not be null as long as
 * position is positive and less then 10
 * ...
 */

public void moveTo(int position) { }
What is Good Documentation?

Link to other documentation

with @see or @link

/**
 * Returns result of {@link #matchesFilenameAndPattern(String, String)}.
 * Test methods like
 * {@link FilePatternTest#fnameStarShouldNotMatch()}
 * calls this method.
 * @param filename filename to compare
 * @return true if filename matches the pattern
 */

public boolean matches(String filename) {
    return this.matchesFilenameAndPattern(filename, "a?.text");
}

P2: Exercise 2
Exercise 2: Snakes & Ladders

- You are given a skeleton for the Snakes and Ladders game
- Add new types of squares
- Test behaviour of squares (using JUnit)
- Write proper documentation
JUnit

- Testing framework
  - Covered in more detail in lecture 4
- **Goal:** Make sure program behaves as expected
- **JUnit:** Individual, independent tests.
@Test
public void newGame() {
    jack = new Player("Jack");
    jill = new Player("Jill");
    Player[] args = { jack, jill };  
    Game game = new Game(12, args);
    game.setSquareToLadder(2, 4);
    game.setSquareToLadder(7, 2);
    game.setSquareToSnake(11, -6);
    assertTrue(game.notOver());
    assertTrue(game.firstSquare().isOccupied());
    assertEquals(1, jack.position());
}

@Test
public void newGame() {
    jack = new Player("Jack");
    jill = new Player("Jill");
    Player[] args = { jack, jill };  
    Game game = new Game(12, args);
    game.setSquareToLadder(2, 4);
    game.setSquareToLadder(7, 2);
    game.setSquareToSnake(11, -6);
    assertTrue(game.notOver());
    assertTrue(game.firstSquare().isOccupied());
    assertEquals(1, jack.position());
}
@Test
public void newGame() {
    jack = new Player("Jack");
    jill = new Player("Jill");
    Player[] args = { jack, jill };
    Game game = new Game(12, args);
    game.setSquareToLadder(2, 4);
    game.setSquareToLadder(7, 2);
    game.setSquareToSnake(11, -6);
    assertTrue(game.notOver);
    assertTrue(game.firstSquare().isOccupied());
    assertEquals(1, jack.position());
}

Specify expected output
@Test
public void newGame() {
    jack = new Player("Jack");
    jill = new Player("Jill");
    Player[] args = { jack, jill }
    Game game = new Game(12, args);
    game.setSquareToLadder(2, 4);
    game.setSquareToLadder(7, 2);
    game.setSquareToSnake(11, -6);
    assertTrue(game.notOver());
    assertTrue(game.firstSquare().isOccupied());
    assertEquals(1, jack.position());
}

The exercise comes with some existing tests for reference.
