What does this evaluate to?

String object (comment is ignored)

String 'This is a string'

This evaluates to nothing

The text in "is a comment" the 'This is a string' is a String,

a comment object and a string object
What is the difference between the values true and True?

- True is an Object, true is a condition
- True is a class and true a value
- true is an instance of True
- boolean value true, True isn't
- True is the object, true a message
- True is an object and trie is the condition
How can I programmatically find the superclass of the class of the number 0?
What does this do?

selects all abstract classes and classes without child class

Returns all abstract classes that have no implementation
What about this?

- All classes that have abstract child classes
- All classes that are not abstract but have abstract child classes
- All classes that are not empty and abstract
- Select all classes that are not abstract and selects all their subclasses that are abstract and not empty
- Select all classes that are abstract and have subclasses that are implemented
- We were wondering if the contents of the exercise hours which was introduced in addition to the lecture is going to be in the exam as well?
