

Pervasive Visualization in Augmented Reality for Software Monitoring

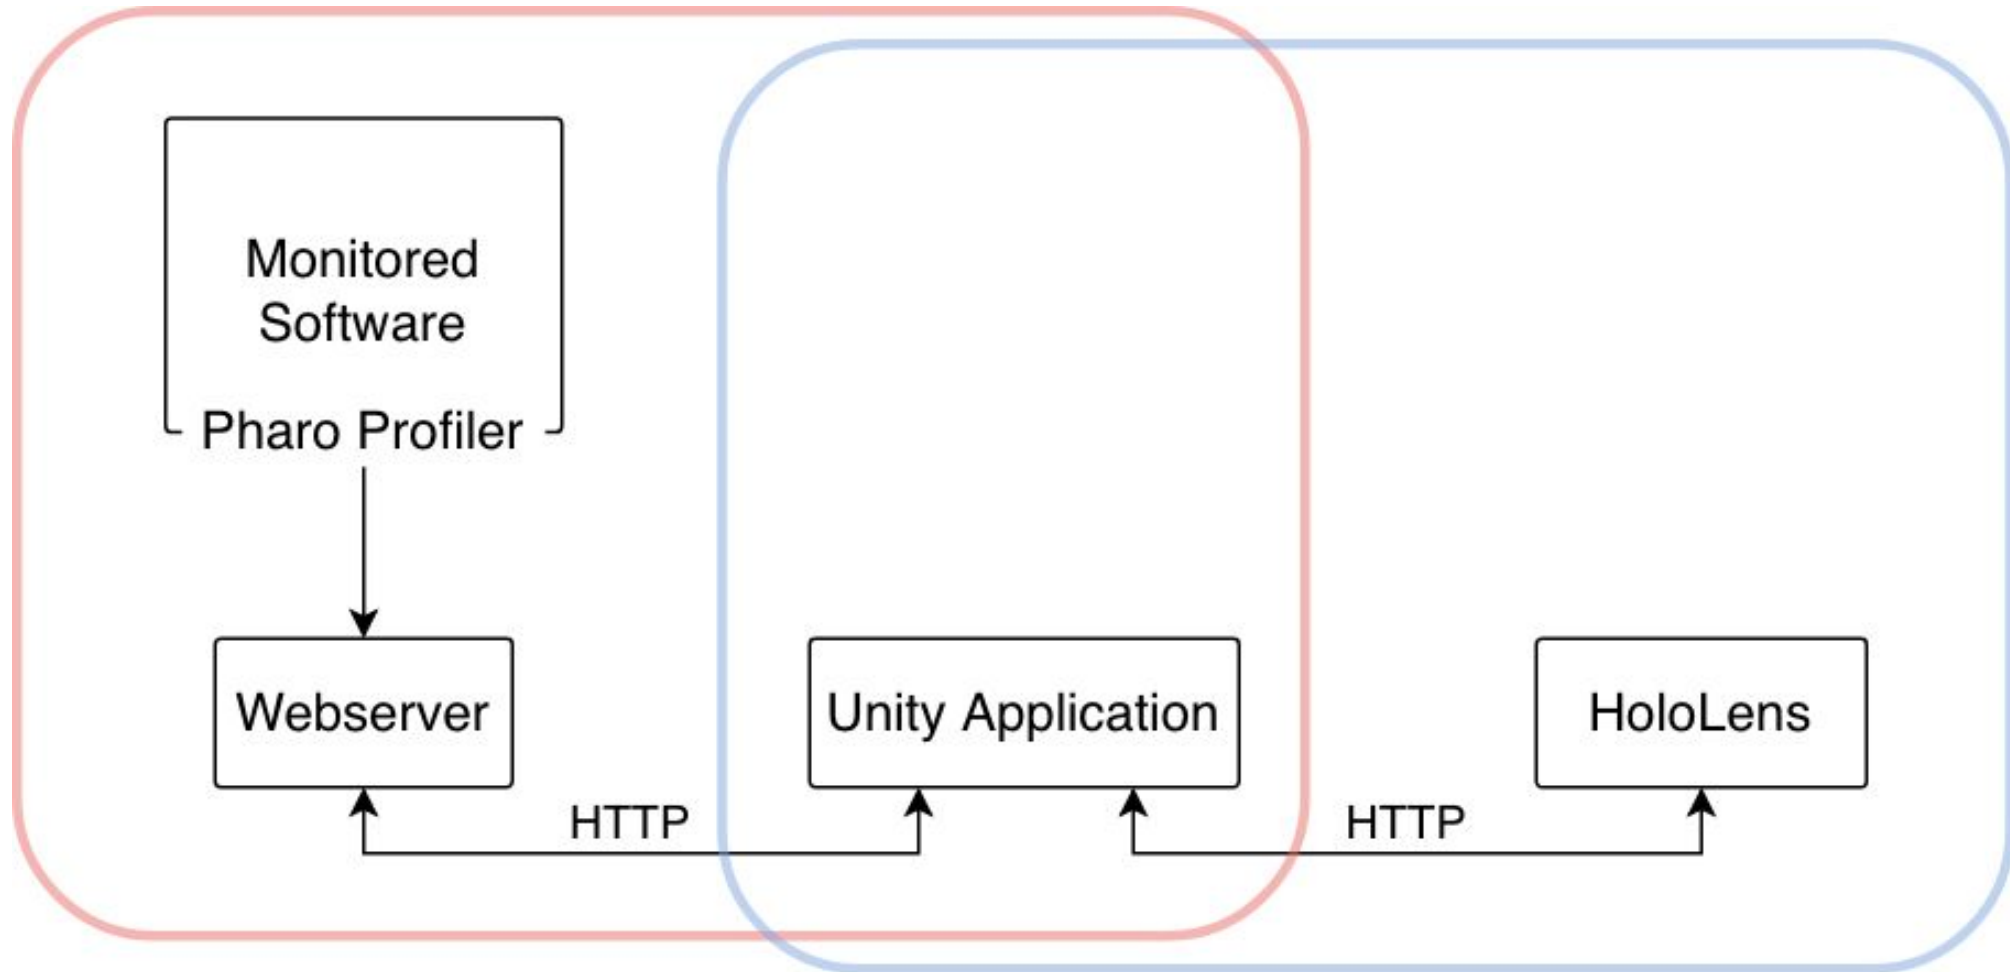

Bachelor Thesis by Mario Hess

Supervised by Leonel Merino

Motivation

- Developing a software entails many design decisions
- Impact on performance is hard to predict
- Developers reluctant to give up screen space

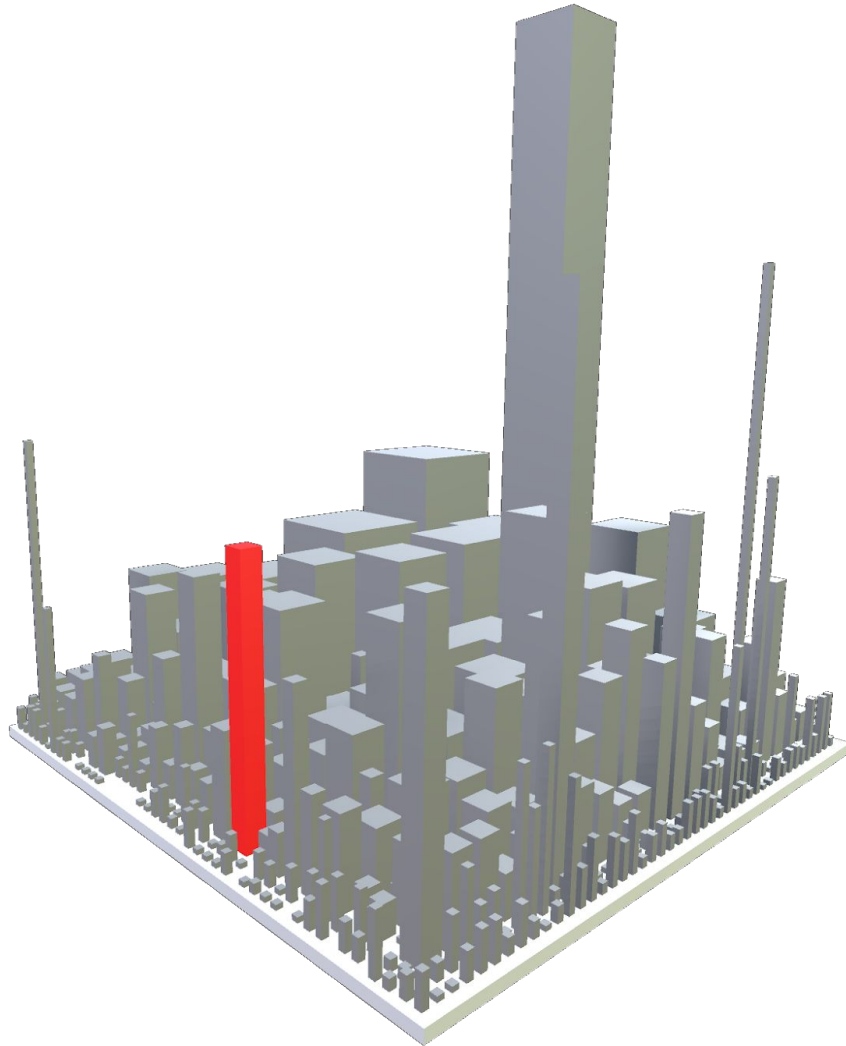

Pipeline

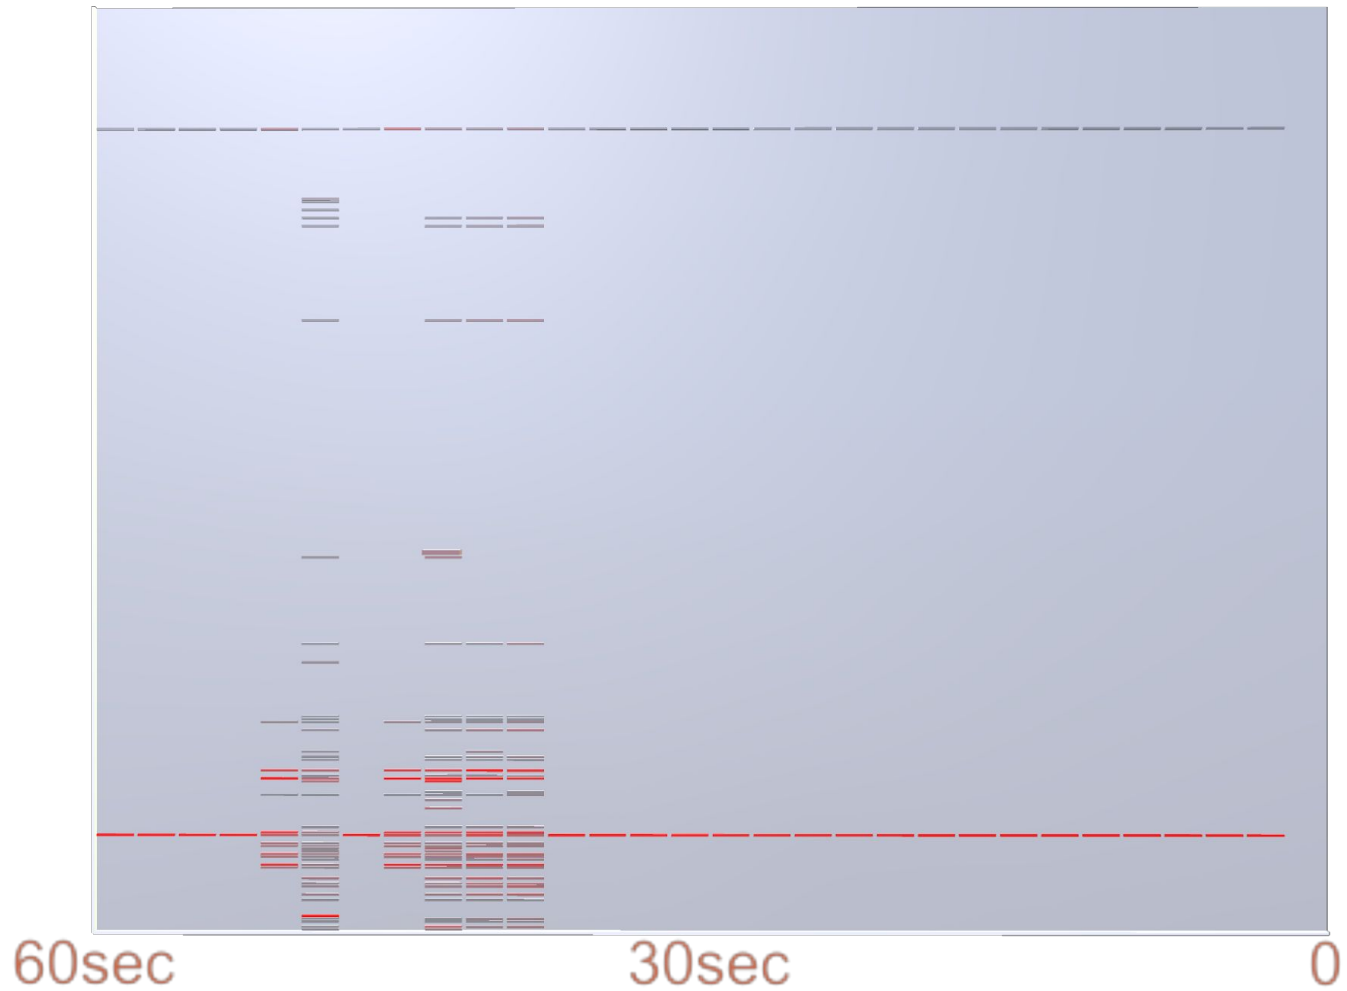

Overview

Difficulties & Shortcomings

- Selection

Future Work

- Evaluation
- More ways to interact
- Reduce elements in visualization
- Other visualization techniques

Summary

Motivation

- Developing a software entails many design decisions
- Impact on performance is hard to predict
- Developers reluctant to give up screen space
