

Analyzing cryptographic questions on Stack Overflow

Seminar Project
28.01.2020

Dave Meier

Research questions

- RQ1: What **topics** are covered by cryptography-related questions asked on Stack Overflow?
- RQ2: Which topics are the **most popular** among cryptography-related questions?
- RQ3: Which cryptography-related topics are the **most difficult** to answer?

Procedure

1. Gather data from Stack Overflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

1. Gather data from Stack Overflow

2. Generate topics with LDA

3. Calculate metrics for RQ2 and RQ3

- I. Download posts with tag «cryptography» (as CSV) from <https://data.stackexchange.com/>
- II. Tag analysis to get tags related to «cryptography»
- III. Download a separate CSV for each related tag

1. Gather data from Stack Overflow

II. Tag analysis to get tags related to «cryptography»

- $H1$ of tag "x" = $\frac{\#posts\ containing\ "x"\ AND\ "cryptography"}{\#posts\ containing\ "x"}$

- Example: $H1$ of «**stream-cipher**»

- 11'130 posts with "cryptography"
- 29 posts with "stream-cipher"
- 11 posts with both

$$H1(\mathbf{s.c.}) = \frac{11}{29} = 0.379310$$

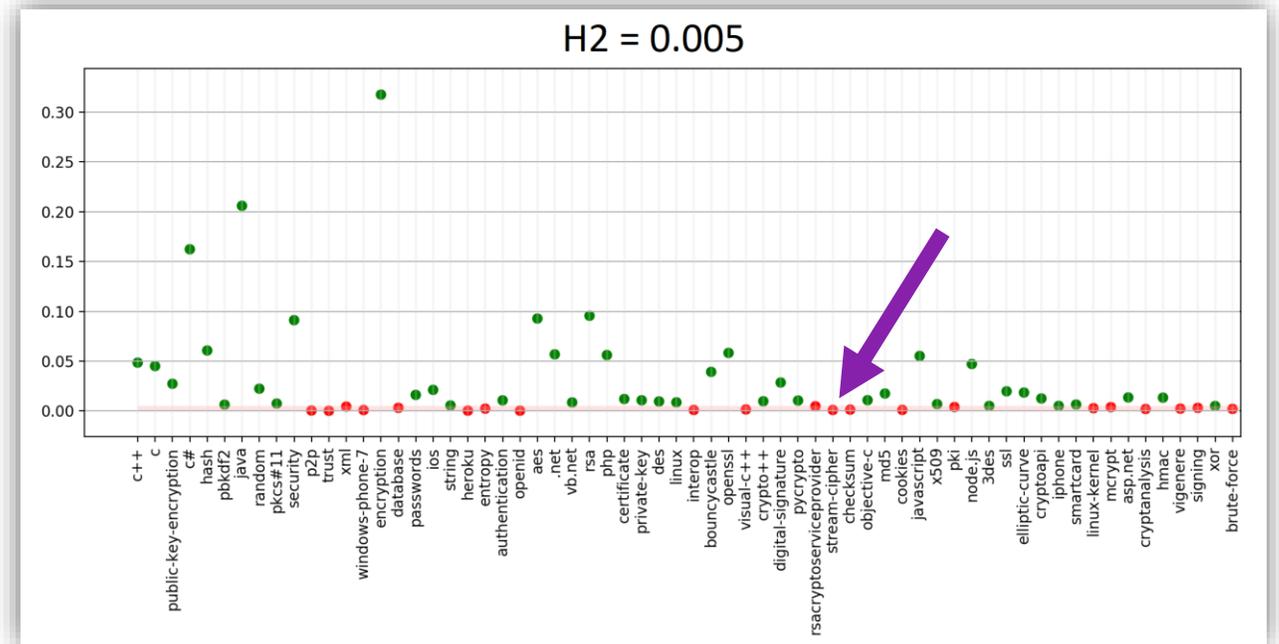

II. Tag analysis to get tags related to «cryptography»

- $H2$ of tag "x" = $\frac{\#posts\ containing\ "x"\ AND\ "cryptography"}{\#posts\ containing\ "cryptography"}$

- Example: $H2$ of «**stream-cipher**»

- 11'130 posts with "cryptography"
- 29 posts with "stream-cipher"
- 11 posts with both

$$H2(\mathbf{s.c.}) = \frac{11}{11'130} = 0.0009883$$

1. Gather data from Stack Overflow

2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

- I. Download posts with tag «cryptography» (as CSV) from <https://data.stackexchange.com/>
- II. Tag analysis to get tags related to «cryptography»
- III. Download for each related tag a separate CSV

- 
1. Gather data from Stack Overflow
 2. Generate topics with LDA
 3. Calculate metrics for RQ2 and RQ3

Demo

1. Gather data from Stack Overflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

Optimizing LDA

- With GridSearch
 - «Number of topics»
 - «learning_decay»: Controls learning rate
 - «doc_topic_prior»: alpha
 - «topic_word_prior»: beta
- By hand with pyLDAvis

1. Gather data from StackOverflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

Results:

Topic 1:

hash password md5 use salt valu user sha1 function store (password, hash)

Topic 2:

encrypt string decrypt code use key array byte tri (encrypt, decrypt)

Topic 3:

certif key use openssl file public privat server sign (certificate, openssl)

1. Gather data from Stack Overflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

RQ2: Find most popular topics

1. Gather data from Stack Overflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

Results for RQ2:

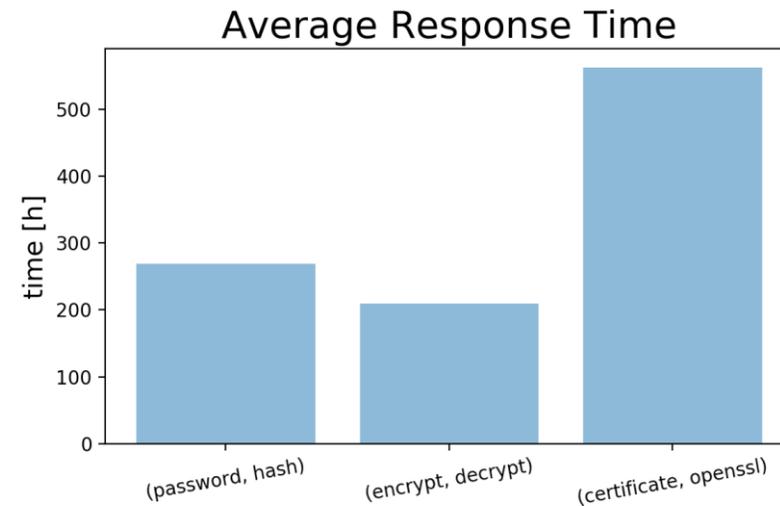

1. Gather data from Stack Overflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

RQ3: Find most difficult topics

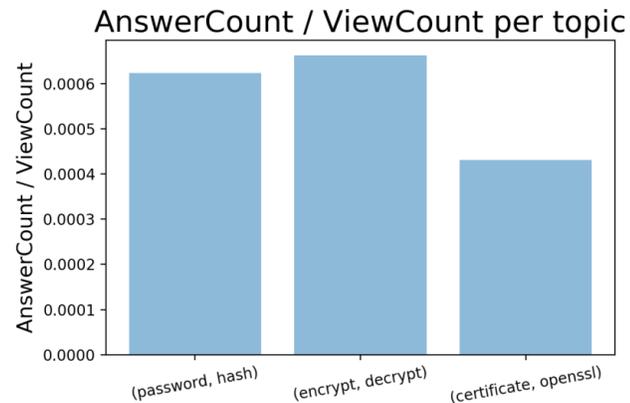

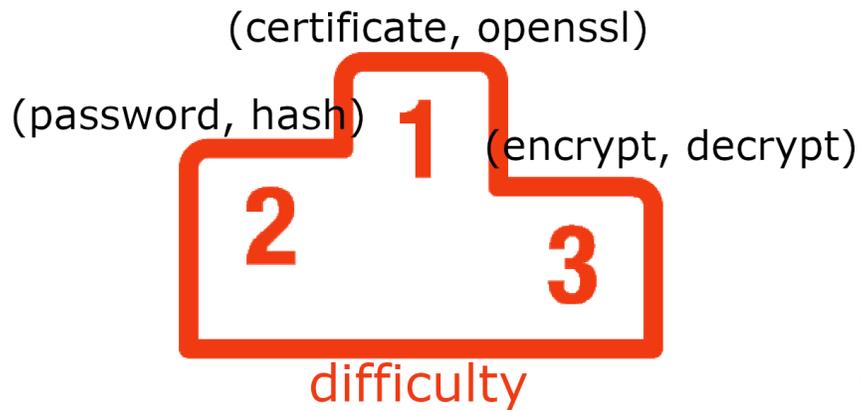

The **smaller** the more difficult

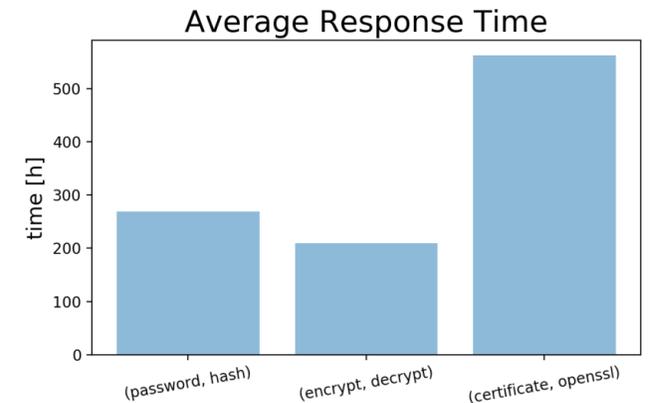

The **bigger** the more difficult

1. Gather data from Stack Overflow
2. Generate topics with LDA
3. Calculate metrics for RQ2 and RQ3

RQ3: Find most difficult topics

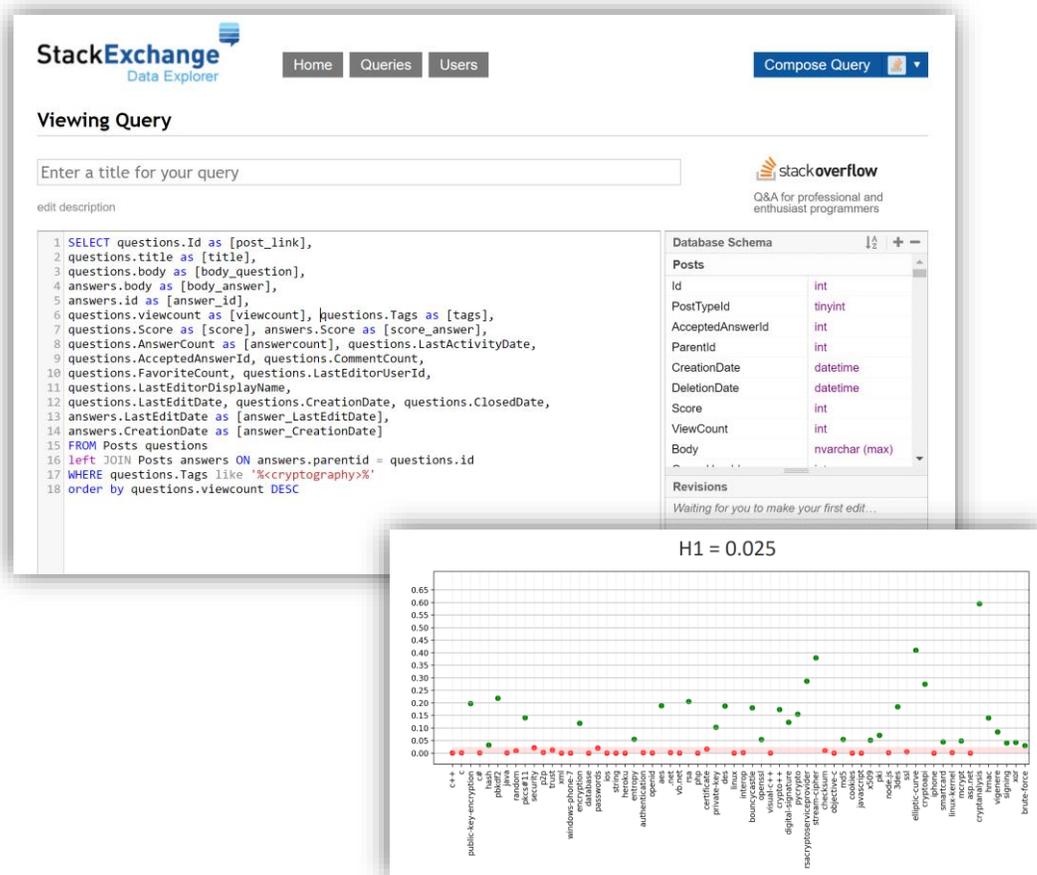

The **smaller** the more difficult

The **bigger** the more difficult

Summary

Topic 1:

hash password md5 use salt valu user sha1 function store (password, hash)

Topic 2:

encrypt string decrypt code use key array byte tri (encrypt, decrypt)

Topic 3:

certif key use openssl file public privat server sign (certificate, openssl)
